

Test Strategy Document – Retail Domain

This Test Strategy document defines the testing approach, objectives, responsibilities, entry and exit criteria, and defect management process for the Retail application project.

1. Domain Details

Retail Domain Application

2. Team Structure

Total QA Team Size: 27
Manual Testers: 20
Automation Testers: 7
QA Leads: 2
QA Manager: 1

3. Test Objectives

Functional Testing
Integration Testing
User Acceptance Testing (UAT) Support

4. Entry Criteria

Requirements Approved
Test Environment Ready

5. Exit Criteria

All P1 and P2 defects closed
All planned test cases executed successfully

6. Defect Management

Azure DevOps will be used for defect tracking and management. Defects will be categorized based on severity and priority. Daily defect review meetings will be conducted to monitor defect status and resolution progress.

7. Roles and Responsibilities

QA Manager – Overall test governance and reporting

QA Leads – Coordination, planning, and execution monitoring

QA Testers – Test case design, execution, and defect reporting

8. Test Approach

Testing activities will follow a structured and risk-based approach. Functional and integration testing will be executed across planned cycles, followed by UAT support to validate business workflows.
